DETAILED ACTION

1. This office action is in response to the amendment of August 25, 2009.

Allowable Subject Matter

2. Claims 1-6 are allowed.
3. The following is an examiner's statement of reasons for allowance: the prior art does not teach or suggest the limitations for a multistage pump having a plurality of intermediate casings wherein each of said intermediate casings has:
- a. a cylindrical side portion,
 - b. a protruding portion protruding radially outward from the cylindrical side portion,
 - wherein said protruding portion has an outside diameter larger than the outside diameter of the cylindrical side portion,
 - c. a stage flat portion extending radially inward from the protruding portion and with which an axial end face of an adjacent intermediate casing is held in contact,
 - d. a stage side portion extending axially from said stage flat portion,
 - said stage side portion has an outside diameter smaller than the inside diameter of the cylindrical side portion,
 - e. a bottom portion extending radially inward from said stage side portion,
 - f. wherein said cylindrical side portion, said protruding portion, said stage flat portion, said stage side portion and said bottom portion are integrally formed in a combination wherein

- a. a relief plate having an outer circumferential end face which is held in contact with an inner surface of a cylindrical side portion of said adjacent intermediate casing is attached to said bottom portion of said intermediate casing; and
- b. said relief plate, said stage side portion, said stage flat portion, and said inner surface of said cylindrical side portion of said adjacent intermediate casing form a space in which an O-ring is fitted.

The prior art of Kajiwara US 5,256,033 ('033), Kajiwara et al. US 5,318,403 ('403), and Kajiwara et al. US 5,369,972 teach interstage casings for multistage pumps. Kajiwara '033 teaches an interstage casing with a cylindrical side wall 21, cylindrical portion 25, relief portion 26, stage flat portion 27, a projecting portion 28, and a side plate 33 welded to a bottom wall 24 that extends radially inward from a cylindrical portion. Kajiwara '972 teaches it was known in the art to have a guide vane side wall 7, analogous to a side plate 33 of Kajiwara '033, held in contact with a cylindrical side portion of an adjacent casing and forming a space radially outward of a bottom portion 2 of the intermediate casing the guide vane side wall 7 is part of. Kajiwara '403 teaches a similar casing then that of Kajiwara '033 wherein an o-ring is fitted into a recessed portion 26 analogous to a relief portion 26 of Kajiwara '033. The prior art references of Kajiwara '033, '403, and '972 do not teach the limitations wherein a space for an o-ring is formed by a relief plate that is held in contact with the inner surface of an adjacent interstage casing, a stage side portion, and a stage flat portion that extends radially inward from a protruding portion that protrudes radially outward from a cylindrical side

portion that it is integrally formed with. These structural aspects of the instant invention which form the space for an o-ring between interstage casings distinguishes over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
